

VM PRO-ZINC TRAINING (COURSE DESCRIPTIONS)

VM PRO-ZINC is offered in a graduated format. This method has been developed to help installers develop skills and provide project support. VM PRO-ZINC Training is **required** of all installers of VM ZINC®.

• VM PRO-ZINC I (1 DAY, Wall Cladding):

Covers most of the details involved with the installation of our wall cladding systems: including: corners, windows, parapets, etc. This course also covers soldering and proper bending techniques. Lunch is provided. Prerequisite: None.

• VM PRO-ZINC II (2 DAYS, Roofing):

Covers most of the details involved with the installation of our roofing systems including: hip, ridge, eave, head flashing, panel layout, seaming, corners, penetrations, skylight flashing, soldering, etc. Lunch is provided. Prerequisite: None.

Please feel free to take advantage of our trainings by asking your project specific questions. Be advised that all project specific questions must be submitted at least one week prior to attending the training to allow us adequate time to prepare our response. Any requests not submitted at least one week prior to the training will not be covered.

VM PRO-ZINC (WHAT TO EXPECT)

Every participant attending training will leave the training able to understand and communicate the concerns involved in the proper installation of our zinc panel systems. These concerns include, but are not limited to:

- Corrosion and Patina
- Expansion and contraction
- Cold Weather Installation
- Harmful Interactions with other materials
- Malleability
- Handling and Storage

Those attending day courses other than Intro to VM Zinc must have a good working knowledge of sheet metal. Although the trainings are set-up to accommodate every level of installer, field installers, shop foremen, and field foremen will benefit most. These trainings are intended as technical support for installation of metals from VM Building Solutions USA Inc and for those who will be **on site installing our systems**. **During the training, you will be provided with the necessary tools designed for the details being taught.**

As an attendee, you will gain the understanding of time tested detailing provided by VM Building Solutions USA Inc that has been in existence since 1832. We offer these trainings because we believe in taking a proactive approach toward quality control by providing the installer with this excellent training program. **It is our goal to build lasting relationships with the best sheet metal workers in the industry.**

VM PRO-ZINC TRAINERS

VMBSO employs a group of uniquely talented sheet metal master craftsmen in thirty countries around the world. With origins in the 1830's, when VM ZINC was made the material of choice for rooftops in the city of Paris, no other group has as much combined experience with proper zinc installation. The U.S. team of PRO- ZINC trainers have over 60 years of experience in roofing and sheet metal work in regard to zinc and copper. Members of the training team can be made available to assist with project mock-ups as a value-added service.

Please contact our office to receive information on the availability of this service.
